Introduction

What does it do?

This extension provides an ajax based feedback form. Options include “Yes / No / Yes, but.. comment”. When i saw this feedback form the first time on the internet, i knew that's what i wanted for my web projects. so why not make one for TYPO. Enjoy :).

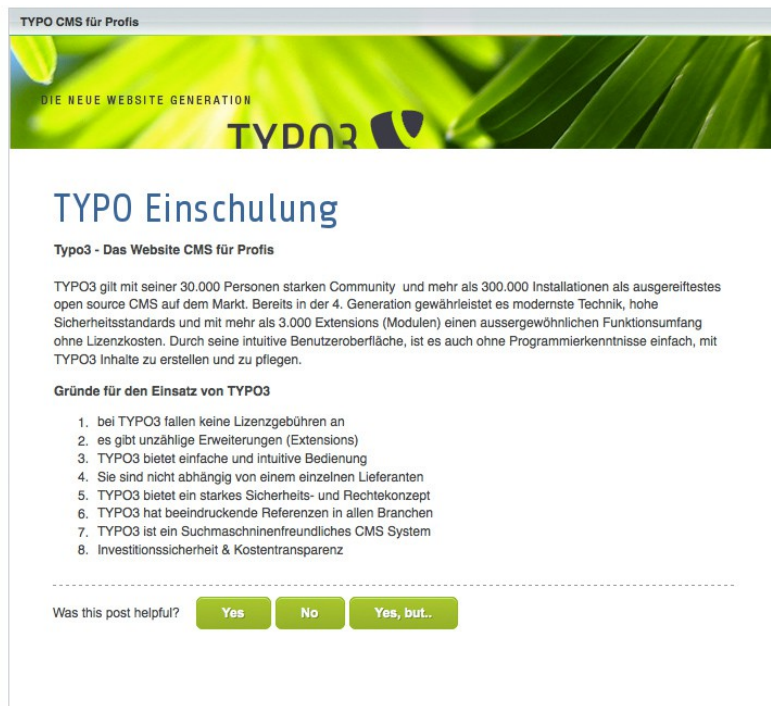

Features

- Ajax based form
No page reloading when submitting the feedback, the future of web
- Form validation
Simple check that no empty comments are sent
- Duplicate entry check
Prevents duplicate entries by the same ip
- CSS themes
White, White Classic, White Solid, Silver, Red, Green, Blue, Beige, Pink
- Multilanguage support
Included: English, German - extensible via locallang.xml
- Custom hover area
Default hover area is the basic form - a second custom area can be defined via class-attribute (“feedback_area”)
- Animation options
Yes/no - if the form should fade-in on mouseover or always be visible
- Statistics
Statistics are displayed in the backend module in the user section (incl. time filter)

Requirements

- You will need jQuery 1.7.1 or later to make sure everything is working
- Developed and tested with typo3 4.5.20

Users manual

Just insert the plugin via TS like:

```
subparts.TH_FEEDBACK < plugin.tx_thfeedback_pi1
```

And in the html insert the subpart marker

```
<!--###TH_FEEDBACK###begin-->
```

```
<!--###TH_FEEDBACK###end-->
```

Statistics

In the backend in the “User Tools” section you will find the “TH-Feedback” menu item. It gives you statistics for the website feedback.

Statistics features

- Top pages (sorted by “most comments”)
- Time filter with calendar
- Display comments for a page

TH-FEEDBACK STATISTICS

Choose a timeframe:  01.01.2012  09.12.2012

TOP	PAGE-ID	PAGE-TITLE	YES	NO	YES, BUT	TOTAL	COMMENTS
1	180	TYPO Software	0 (0)%	0 (0)%	1 (100)%	1	view comments
2	7	TYPO Webdesign	0 (0)%	0 (0)%	1 (100)%	1	view comments
3	42	TYPO Extensions	0 (0)%	0 (0)%	1 (100)%	1	view comments
4	11	TYPO Hosting	0 (0)%	0 (0)%	1 (100)%	1	view comments
5	138	VIDEO Streaming	0 (0)%	0 (0)%	1 (100)%	1	view comments
6	182	MOBILE Apps	1 (100)%	0 (0)%	0 (0)%	1	
7	8	CMS Homepage Nitro	1 (100)%	0 (0)%	0 (0)%	1	

Configuration

You will find a configuration file "**th_config.php**" in the root folder of the extension.

Following options

\$config_css (choose your design theme)

options: white, whiteclassic, whitesolid, silver, blue, green, red, beige, pink, custom_1, custom_2, custom_3

- use any given color theme (white, etc.)
- use your own color theme (custom_1, etc.)
note: the buttons are provided by <http://www.cssbuttongenerator.com/> - for custom buttons just go to their website and create your own new styles

\$config_animate_form (hide / unhide animation)

options: yes, no

- yes: the form will initially be invisible. only a placeholder text "Feedback" is displayed and when hovered over one of the hover-areas (form, custom-area) the form will fade-in
- no: the form will constantly be displayed (no fade-in animation on hover)

\$config_custom_hoverarea

options: yes, no

- yes: when using your own custom hover area as described below
- no: no custom hover used (in this case hover works only on the form itself)
- **IMPORTANT:** only set \$config_custom_hoverarea to "yes" if you intend to insert a custom hover with "<div class='feedback_area'> ... content ... </div>" in your page, or it will not work. See an exemple below:

```
<div class="feedback_area">
<!--###CONTENT###begin-->
<!--###CONTENT###end-->

<!--###TH_FEEDBACK###begin-->
<!--###TH_FEEDBACK###end-->
</div>
```

locallang.xml (change all the interface contents)

Known problems

- **BE-Statistics:** GMT time is not built-in
- **BE-Statistics:** Translation-Overlay for page titles is not built-in (default language is used)

If you find any bugs please report to dev (at) typohosting.at.
Thanks.

To-Do list

- db: change all sql queries to typo3 dbal
- feature: possibility to vote single content blocks or entire pages
- date: add GMT in date functions
- translation: add translation overlay in statistics page titles
